StarGate

How to redesign PRI gateway to PRI/VoIP gateway

Quick guide

Version 1.00

www.2n.cz

1.1. What you need to start

- CPU with bios 2.52
- New thin VoIP card
- PRI card
- Special firmware

1.2. Redesign

- Remove all cards from gateway
- Between 3rd and 4th position (counting from right) is red and five black jumpers. Change them according picture

- Place cards according picture and add GSM/3G cards

1.3. Finishing of configuration

- Upload firmware for VoIP card. If you are not able to do that check if MAC address is set for VoIP interface by at command `ati4`

SNumber: M112-0812345678

MacAddr: 00-50-B2-81-AB-4A

DspAddr: 00-50-F2-25-AC-8A

Enabled: DSS1 SIP TUN

Limited: 125 of 850 hours (limited)

Network: (all)

In case that MAC address is not set, contact technical support.

- In basic setting Gateway will be configured as has to be set to ISDN – DSS1
- License has be for both DSS1 and SIP
- Configure gateway
