Care and Maintenance

Keep the Fax Server dry. If it gets wet, wipe it dry immediately. Liquids might contain minerals that can corrode the electronic circuits.

Use and store the Fax Server only in normal temperature environments. Temperature extremes can shorten the life of electronic devices and distort or melt plastic parts.

Keep the Fax Server away from excessive dust and dirt that can cause premature wear of parts.

Do not use harsh chemicals, cleaning solvents or strong detergents to clean the Fax Server.

1 Introduction

The Fax Server is a system with ISDN and Ethernet interfaces. It offers services that can be compared with what the PBX does for voice calls. On top of that it will record and archive all fax communication. The Fax Server has the following functions:

Receiving faxes

Incoming calls on the fax numbers are answered by the Fax Server. Received faxes are stored on the internal Drive of the Fax Server. PC’s have access to the Fax Server via the LAN and can view and print all faxes from the internal Drive of the Fax Server.

Distribution of faxes via Email

The preferred method to receive faxes for most people is as internal email. Dependant on the fax Number that the Fax Server has answered to it will forward the fax to the email address that belongs to this number.

Receiving faxes on paper

If required all received faxes can be printed out on a network printer.

Sending faxes

Faxes can be sent from any computer on the network that has SendFax software installed. On the PC the SendFax software behaves as a printer. SendFax software transfers the file over the network to the Fax Server which in turn takes care of the actual fax transmission. All sent faxes remain stored on the Fax Server and can be accessed via the LAN at any time.

Archiving faxes

The most important function of the Fax Server is to give access to all fax correspondence that took place since it was installed. The Fax Server Access System software supplied is the best tool to access the faxes because they are presented as a database.

Several models

There are two models of ISDN Fax Servers. This has to do with the different ISDN line types that exist. The types are primary rate (PRI) and basic rate (BRI).

The interface to the network is called E1 for primary rate and S0 for basic rate.
Basic rate lines carry 2 telephone channels. Primary rate lines can carry a variable number of channels that the user has subscribed to with a maximum of 30.

The models for basic rate and for primary rate are different because of the interface to the telephone network.

The model for primary rate can send and receive on up to 16 channels simultaneously. It has only one line port.

The model for basic rate is available for 2 lines and 4 lines and can work on 4 or 8 channels simultaneously.

**Identical operation**

The differences between the Fax Servers for basic rate and for primary rate are only small. In this manual they are treated as one product and differences, if they exist, are mentioned only when needed.
2 Unpacking and installation

The various models of the Fax Servers for ISDN are:

- Fax Server ISDN PRI
- Fax Server ISDN BRI – 2 lines
- Fax Server ISDN BRI – 4 lines

There are several options available:

- Fax channels
  - from 1 to 16 channels on a ISDN PRI
  - from 1 to 4 channels on a ISDN BRI – 2 lines
  - from 1 to 8 channels on a ISDN BRI – 4 lines
- frame for 19” rack mounting

The minimal configuration is a Fax Server with at least 1 channel.

2.1 What is in the box

The Fax Server ISDN PRI desktop model comes with the following parts:

- Mains power supply adapter and cable.
- two 8-wire cables with RJ45 connectors
- CD with software
- This manual

The Fax Server ISDN PRI 19” model comes with the following parts:

- Mains cable.
- two 8-wire cables with RJ45 connectors
- CD with software
- This manual

The Fax Server ISDN (BRI) desktop model comes with the following parts:

- Mains power supply adapter and cable.
- Per line a cable kit that contains a short and a long 8-wire cable with RJ45 connectors (4 cables or 8 cables in total)
- Per line a T-adapter (2 or 4)
- CD with software
- This manual
The Fax Server ISDN (BRI) 19” model comes with the following parts:

- Mains cable.
- Per line a cable kit that contains a short and a long 8-wire cable with RJ45 connectors (4 cables or 8 cables in total)
- Per line a T-adapter (2 or 4)
- CD with software
- This manual

Please note: For some countries we do not supply a mains cable with our product (Australia, Switzerland). The reason for this is that the cable with the correct mains plug is not available in the country of manufacture.
2.2  Connecting to power

On the desktop model

The Fax Server is powered through an external power adapter. It does not have an On/Off switch; the Fax Server is turned on by connecting the power supply.

On the 19” model

The Fax Server is powered through a line cord. The power supply is internal. The unit does not have an On/Off switch; the Fax Server is turned on by connecting the mains cable.
2.3 Connecting to E1 primary rate ISDN

This only applies to the model for ISDN primary rate.

The Fax Server PRI is connected in series with the PBX. With the Fax Server PRI you have received a cable with two RJ45 connectors. This cable is used to connect the Fax Server PRI to the wall socket. The existing cable can be used to connect the Fax Server PRI to the PBX as is shown in the figure below.

It is possible that you do not want to connect the PBX together with the Fax Server on one line because you want to use the line for faxing only. In this case the PBX and the connection to it are not there.

It is also possible that you want to use all 30 channels of the E1 line for faxing. In this case a second Fax Server PRI can be connected in place of the PBX.
The figures below are examples of a possible setup of the Fax Server PRI.
2.4 Connecting to S0 Basic Rate ISDN

There are three ways to use a Fax Server ISDN Basic Rate:

- Stand alone on lines that are used for the Fax Server only.
- Together with other equipment such as the PBX

You must always use the supplied T-splitters to connect to the ISDN S0 line. The T-splitter is marked that it is made for a “Call Recorder”. The reason is that the T-splitter was indeed originally made for the Call Recorder, another product that has the same interface to the network.
The figures below are examples of a possible setup of the Fax Server ISDN Basic Rate.
2.4.1 Without other equipment in Stand Alone mode

This is how to connect to the ISDN S0 bus if you use the line only for the Fax Server. This applies to point-to-point and point-to-multipoint lines.

Use the long cable supplied in the box to connect to the TE port of the T-adapter and use the short cable to connect the port ISDN of the T-adapter to Port 1 to 4 of the Fax Server.
2.4.2 With other equipment in Stand Alone mode

This only applies to point-to-multipoint ISDN lines. If you doubt whether the line that you have is point to multi point select the next option.

This way of connecting has a small advantage over the next option. You do not disconnect other equipment while connecting the Fax Server.

The connection is the same as above: Use the long cable supplied in the box to connect to the TE port of the T-splitter and use the short cable to connect the port ISDN of the T-adapter to Port 1 to 4 of the Fax Server.

This is the classic way to connect ISDN equipment to point to multi point lines.

![Diagram of ISDN connection]

ISDN

vidicode
2.4.3 With other equipment in Pass Through mode

This is the most often used method to connect the Fax Server on ISDN basic rate. We call this “pass through mode”. The difference is that the Fax Server can see and record all communication of connected terminal equipment. This is used for recording fax transmissions of other fax machines.

In this case the connection again is the same as above, but all terminal equipment (TE) that must be recorded is connected to the TE port of the adapter. Usually this will be the PBX with one or more fax machines connected to it.
3 Configuration and operation

After you have connected the hardware it is time to configure and use the Fax Server. This chapter explains you how the user interface works. In the following chapters we guide you with the configuration. You must:

- On the keyboard of the Fax Server, go through the system settings and make changes if required and
- On the keyboard of the Fax Server, go through the network settings so the Fax Server will fit in with your network and
- On the keyboard of the Fax Server, edit the number list to enable the fax numbers and attach email addresses to them or
- On the PC of the systems manager, arrange the user profiles and user access to the Fax Server

3.1 Operation basics

The Fax Server has a common menu driven user interface. Most functions and operations are initiated by pressing a function key followed by a sequence of menu keys of which the function is determined by the text in the display. The use of function keys and menu keys is as follows:

**Function keys**

The most frequently used functions of the Fax Server have been grouped in the function keys. Throughout the entire manual, symbols representing the function keys are used to indicate the function key corresponding to the described function.

**Menu keys**

After pressing a function key the available functions are assigned to the four menu keys. The operation of the menu keys is determined by the text in the display right above the corresponding key. Throughout the entire manual figures representing the display with or without the menu keys are used to show the required action corresponding to the described feature.

Example:
When you are instructed to press the **MENU** key in the text it means you are instructed to press the grey key below the text **MENU** in order to open the System setting menu.

### 3.2 Frequently used key indicators

The following menu key functions are consistently used throughout the manual.

- **MENU** in the display indicates the presence of an underlying menu
  - Press **MENU** to open the underlying menu

- **NEXT** in the display indicates the presence of more menu items
  - Press **NEXT** to jump to the following menu item

- **BACK** in the display indicates the presence of an embracing menu
  - Press **BACK** to return to the embracing menu

- **STOP** in the display indicates the absence of an embracing menu
  - Press **STOP** to return to operating mode of the Fax Server

- **CHANGE** will toggle the item in the display between "On" and "Off"
  - In some cases **CHANGE** is used to increase or decrease a value.

### 3.3 Save Changes

After making settings the user is forced to press **YES** or **NO** before returning to operating mode. Press **STOP** in the menu and the display will show:
YES returns the Fax Server to normal use with changed settings
NO returns the Fax Server to normal use without changed settings
CANCEL returns to the settings
4 System settings

When you have connected the Fax Server you can configure it. This chapter is about the system settings. Enter the system settings as follows.

On the desktop model:

- Press the **System Settings** key.

On the 19” model:

- Press the **Settings** key.
- Press **System** to move to the menu.

From here on desktop model and 19” are the same. A sequence of system settings will need to be passed. Every item will have at least three options:

- Press **NEXT** to move on to the next menu item.
- Press **CHANGE** to enter the value or property of the menu item.
- Press **STOP** to exit the menu.

Press **NEXT** repeatedly to scroll through the menu items. The following sequence of menu items will appear:

4.1 Fax ID

The Fax ID is the identification of the fax machine. When a fax is transmitted between two fax machines, they both negotiate their Fax ID's. The Fax ID is also displayed in the top line of the fax. The Fax ID that you must enter here is just the default Fax ID that applies when there are no matching user configurations. When the Fax Server is sending or receiving on behalf of one of the users, it will use the Fax ID for that user.
Set the Fax ID.

- Press **CHANGE** to enter the Fax ID.

Enter the Fax ID.

- Press **STORE** to save the Fax ID.
- Press **NEXT** to move on to the next menu item.

It is a good practice that a Fax ID is the number that the fax can be reached on. However text can also be entered here.

### 4.2 Top text

The top text is the text that is printed as the top line of the fax. Usually this will be the name of the person or company.

Set the Top text.

- Press **CHANGE** to enter the Top text.

Enter the Top text.

- Press **STORE** to save the Top text.
- Press **NEXT** to move on to the next menu item.
4.3 Dial prefix

The dial prefix is a standard number sequence that must be dialed before an external number can be reached. When a Fax Server is connected to an internal extension of a digital PBX a common prefix would be “0”.

It can also be used to route faxes to the most economical network provider, that sometimes is not the same provider as for telephony because fax transmissions tend to be shorter than telephone calls.

![Dial Prefix: Off](image)

Set the dial prefix.

- Press **CHANGE** to enter the Prefix.

![Dial Prefix: ][](image)

Enter the dial prefix.

- Press **STORE** to save the dial prefix.
- Press **NEXT** to move on to the next menu item.

4.4 Stand Alone Mode

Usually the Fax Server is connected to the line in series with a PBX (Pass Through Mode). If this is not the case (Fax Server is the only device on the line) the Stand Alone Mode setting has to be turned On.

![Stand Alone Mode: Off](image)

Set the Stand Alone Mode.

- Press **CHANGE** to enable Stand Alone Mode.

**Please Note:** If the Fax Server is in series with a PBX Stand Alone Mode must be turned Off.
Stand Alone Mode: On
NEXT CHANGE STOP

Set the Stand Alone Mode.

- Press **STORE** to save the Stand Alone Mode.
- Press **NEXT** to move on to the next menu item.

### 4.5 Connection (BRI only)

This option only applies to ISDN Basic Rate. There are two configurations of Euro ISDN basic rate lines, called Point-to-Point and Point-to-Multipoint. Because the protocol is different the Fax Server must know. In case of doubt you must call your telephony provider.

Connection: Multipoint
NEXT CHANGE STOP

Set the Connection type.

- Press **CHANGE** to alter the setting.

Connection: Point-to-Point
NEXT CHANGE STOP

Set the Connection type.

- Press **STORE** to save the connection type.
- Press **NEXT** to move on to the next menu item.

### 4.6 Total Lines (BRI only)

The Total Lines property determines the number of lines that can be occupied by the Fax Server BRI counted from port 1 to 8 for sending. Lines are counted from port ISDN 1 to ISDN 4. This property is used to keep ISDN BRI lines completely free of outgoing faxes.
Set the Maximum number of Fax lines.

- Press + or - to change the number of lines.
- Press NEXT to move on to the next menu item.

### 4.7 Max. Fax Lines

The Maximum Fax Lines property determines the number of lines that can be occupied by the Fax Server. This property is used to prevent the Fax Server to seize too many lines and to guarantee that a fixed number of lines is available for the PBX.

Set the Maximum number of Fax lines.

- Press + or - to change the number of lines.
- Press NEXT to move on to the next menu item.

### 4.8 Max. Rx Fax Lines

The maximum Rx Fax Lines fixes the maximum number of lines that can be used by the Fax Server for Fax reception.

Set the Maximum Rx Fax Lines number.

- Press + or - to change the number of lines.
- Press NEXT to move on to the next menu item.

### 4.9 Max. Tx Fax Lines

The maximum Tx Fax Lines fixes the maximum number of lines that can be used by the Fax Server for Fax transmission.
Set the Maximum Tx Fax Lines number.

- Press + or - to change the number of lines.
- Press NEXT to move on to the next menu item.

**4.10 Tx Retries**

Tx Retries determines the number of attempts to send a fax.

Set the number of attempts.

- Press + or - to change the number of attempts.
- Press NEXT to move on to the next menu item.

**4.11 Tx Retry Time**

The TX Send Retry Time determines the interval between the fax transmission attempts.

Set the Retry Time.

- Press + or - to change the Retry Time.
- Press NEXT to move on to the next menu item.

**4.12 Tx Answer Timeout**

The Tx Answer Timeout time determines the time the Fax Server will wait for the remote fax machine to answer the call.
4.13 Tx Start Time

With Tx Start Time a time of the day can be set for the Fax Server to start sending the faxes in the Fax queue. **Please note:** Priority will always be sent at once and not wait for the start time.

```
Tx Start Time: 00:00
NEXT - CHANGE + STOP
```

Set the Tx Start Time.

- Press + or - to change the Tx Start Time or turn **Off**.
- Press NEXT to move on to the next menu item.

4.14 Tx Stop Time

In conjunction with the Tx Start Time the Tx Stop Time sets a limit to the time the Fax Server is given to handle the Fax queue. If Tx Start Time is set to **Off** the Tx Stop Time will not appear.

```
Tx Stop Time: 00:00
NEXT - CHANGE + STOP
```

Set the Tx Stop Time.

- Press + or - to change the Tx Stop Time.
- Press NEXT to move on to the next menu item.

4.15 Fax to printer

Fax to Printer allows for automatic printing of faxes. Network setting of the printer are described in § 5.16.
Fax to Printer: All
NEXT CHANGE STOP

Set Fax to Printer.

- Press CHANGE to select All, Rx Only, Tx Only or Off.
- Press NEXT to move on to the next menu item.

4.16 Protect the Fax Server with a Password

The Fax Server can be protected with a password against unauthorized use. When password protection has been enabled all operations are blocked before the correct password has been entered.

Password: Off
NEXT CHANGE STOP

Setting the Password.

- Press CHANGE enable password protection
- The display will then prompt for a password.

Password: 000
STORE CANCEL

Enter a password.

- Press STORE to enable the entered password.
- Press STOP to exit the menu.

From this point on you will be prompted for the password before entering the menus.

4.17 Remove Password protection

- On the desktop model press the System button (if you are not already in the menu).
• On the 19” model press the key and then press SYSTEM.
• Enter the password and press CONTINUE.
• Press NEXT 11 x.

Password:       On
NEXT  CHANGE  STOP

Enable the Password.

• Press CHANGE to enable the password.
• Press STOP to save and exit the menu.

The password protection has now been enabled.

4.18 Set the Clock

The clock can be set manually, or if available on the network, NTP can be enabled to retrieve the time from a network server.

Clock: Mo 04-12-06 11:03
NEXT  CHANGE  STOP

Setting the clock.

• Press CHANGE to change the setting of the clock.
• Press key’s 1-7 to change the day of the week.

The default date and time format is DD-MM-YY and HH:MM (when American has been set as language the format is changed to MM-DD-YY). Use the arrowed keys to move the blinking character left and right.
• Press softkey **STORE** to store the changes or press softkey **CANCEL** to return to previous values.

**4.19 Set the Language**

You can select the language of your choice. Several languages are available in the Fax Server. Selecting “American” will also influence the date and time format used.

<table>
<thead>
<tr>
<th>Language:</th>
<th>English</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>CHANGE</strong></td>
</tr>
<tr>
<td></td>
<td><strong>STOP</strong></td>
</tr>
</tbody>
</table>

Setting the Language.

• Press **CHANGE** to select the preferred language.
• Press **STOP** to save and exit the menu.
5 LAN settings

Enter the LAN settings as follows.

On the desktop model:

- Press the \( \text{LAN} \) key.

On the 19” model:

- Press the \( \text{key} \).
- Press \( \text{LAN} \) to move to the LAN settings menu’s

A sequence of LAN settings will appear. Every item will have at least three options:

- Press \( \text{NEXT} \) to move on to the next menu item.
- Press \( \text{CHANGE} \) to enter or change the value or property of the menu item.
- Press \( \text{STOP} \) to exit the menu.

Press \( \text{NEXT} \) repeatedly to scroll through the menu items. The following sequence of menu items will appear:

5.1 FTP user

The FTP user is the administrator user name of the Fax Server. It can be used in the Fax Server Access System and Send Fax to log on to the Fax Server. The administrator with this username and password has all the available authorities.

Set the FTP user name.

- Press \( \text{CHANGE} \) to change the FTP user name.
Enter the FTP user name.

Use the numerical keys to enter the FTP user name.

- Press **STORE** to save the FTP user name.
- Press **NEXT** to move on to the next menu item.

### 5.2 FTP password

The FTP password of the Fax Server is the password that goes with the FTP administrator user name of the Fax Server.

Set the FTP password.

- Press **CHANGE** to change the FTP password.

Enter the FTP password.

Use the numerical keys to enter the FTP password.

- Press **STORE** to save the FTP password.
- Press **NEXT** to move on to the next menu item.

### 5.3 FTP port

FTP port is the port number through which the Fax Server Access System and Send Fax log on to the Fax Server. The FTP server port is default set to 21, as is the setting of the port number in the Fax Server Access System and Send Fax. If there is no direct reason to change the FTP server port it is best left unchanged.
Set the FTP server port number.

- Press CHANGE to change the FTP server port number.

Enter the FTP server port number.

Use the numerical keys to enter the FTP server port number.

- Press STORE to save the FTP server port number.
- Press NEXT to move on to the next menu item.

### 5.4 DHCP server

In case a DHCP server is used on the network the use of the DHCP server must be enabled. In case it is not used it must be disabled.

Use of the DHCP server

- Press CHANGE to enable DHCP server.

Use of the DHCP server enabled

- Press NEXT to save and move on to the next menu item.
5.5 IP address

As part of the network the Fax Server requires an IP address. In case a DHCP server is used (see previous item) the DHCP server will assign the Fax Server an IP address. In case a DHCP server is not used a static IP address must be given to the Fax Server.

Set the IP address of the Fax Server.

- Press CHANGE to enter the IP address of the Fax Server.

Enter the IP address of the Fax Server.

Use the numerical keys to enter the IP address of the Fax Server.

- Press STORE to save the IP address of the Fax Server.
- Press NEXT to move on to the next menu item.

5.6 IP subnet mask

The IP subnet mask is used by the Fax Server if access outside the network is required. In this case the gateway will need to be entered as well. In case the used SMTP server is not on the local network the IP mask and gateway must be entered.

Set the IP subnet mask of the Fax Server.

- Press CHANGE to change the IP subnet mask of the Fax Server.
Enter the IP subnet mask of the Fax Server.

Use the numerical keys to enter the IP subnet mask of the Fax Server.

- Press **STORE** to save the IP subnet mask of the Fax Server.
- Press **NEXT** to move on to the next menu item.

### 5.7 Gateway

The Gateway is used by the Fax Server if access from outside the network is required. If so the Gateway and the IP subnet mask will need to be entered. For instance, if the used SMTP server is not on the local network the IP mask and gateway are required.

Set the Gateway of the Fax Server.

- Press **CHANGE** to enter the Gateway of the Fax Server.

Enter the Gateway of the Fax Server.

Use the numerical keys to enter the Gateway of the Fax Server.

- Press **STORE** to save the Gateway of the Fax Server.
- Press **NEXT** to move on to the next menu item.

### 5.8 IP name

Aside from the IP address the Fax Server can also be addressed by an IP name if this function is supported by your DNS server.
Set an IP name for the Fax Server.

- Press **CHANGE** to enter an IP name for the Fax Server.

Enter an IP name for the Fax Server.

Use the numerical keys to enter an IP name for the Fax Server.

- Press **STORE** to save the IP name of the Fax Server.
- Press **NEXT** to move on to the next menu item.

### 5.9 Email address

The Fax Server has extensive Email capabilities. Received faxes will be sent to the email address of the owner of the fax number. Sent faxes will be confirmed by email to the sender.

There is however, a default email address that will be used when no other Email address is known. This might be the email address of the person who is responsible for the Fax Server. The email address to be filled in here is this default email address.

Set the Email address.

- Press **CHANGE** to enter an Email address.
Enter the Email address.

Use the numerical keys to enter the Email address.

- Press **STORE** to save the Email address.
- Press **NEXT** to move on to the next menu item.

Selection of faxes for distribution via Email can also take place according to remote Fax ID.

### 5.10 Reply address

Because the Fax Server cannot receive Email the Emails sent by the Fax Server require another reply address.

Set the Email reply address.

- Press **CHANGE** to enter the Email reply address.

Enter the Email reply address.

Use the numerical keys to enter the Email reply address.

- Press **STORE** to save the Email reply address.
- Press **NEXT** to move on to the next menu item.

### 5.11 SMTP server IP address

The Fax Server uses the IP address of the SMTP server to send Email. In case a local SMTP server is used the IP number can be entered directly. In
case of an SMTP server outside the network both the **Gateway** and the **Subnet Mask** must be set as well.

![SMTP server configuration](image)

Set the IP address of the SMTP server.

- Press **CHANGE** to enter the IP address of the SMTP server.

![Enter SMTP server IP address](image)

Enter the IP address of the SMTP server.

Use the numerical keys to enter the IP address of the SMTP server. Both an IP number or IP name are allowed. In case an IP name is used the DNS server needs to be configured.

- Press **STORE** to save the IP address of the SMTP server.
- Press **NEXT** to move on to the next menu item.

**5.12 SMTP server port**

SMTP server port is the port number through which the Fax Server connection is to be made with the SMTP server. The SMTP-server port of the Fax Server is default set to 25. Do not change the SMTP-server port number when this value is not explicitly changed in the SMTP-server.

![SMTP server port setting](image)

Set the SMTP-server port number.

- Press **CHANGE** to change the SMTP-server port number.
Enter the SMTP-server port number.

Use the numerical keys to enter the SMTP-server port number.

- Press **STORE** to save the SMTP-server port number.
- Press **NEXT** to move on to the next menu item.

**5.13 SMTP Login**

Sometimes SMTP-servers are set up to require a login. In this case SMTP Login should be enabled. **Note:** When SMTP Login is enabled the next questions in the menu will ask for SMTP User name and Password.

Enable SMTP Login.

- Press **CHANGE** to enable SMTP Login
- Press **NEXT** to save and move on to the next menu item.

When SMTP Login is enabled, the next two items in the menu will be:

- **SMTP user**
- **SMTP password**

**5.14 Domain name**

This is the domain name of the SMTP-server. In case the SMTP-server is on the network the network domain is required. In case the SMTP-server is outside the network the domain name of the SMTP-server is required. Contact your provider for more information. Usually the IP-address of the SMTP-server is enough and the domain name is left empty.
5.15 DNS server

In case an IP name has been configured for your SMTP-server you must also give the IP number of the Domain Name Server.
5.16 Printer address

In case automatic printing has been enabled a printer address has to be specified.

Set the Printer address.

- Press **CHANGE** to enter the Printer address.

Enter the Printer address

Use the numerical keys to enter the Printer address.

- Press **STORE** to save the Printer address.
- Press **NEXT** to save and move on to the next menu item.

5.17 Printer port

The Printer port is the port number through which the Fax Server connection is to be made with the printer.

Set the Printer port

- Press **CHANGE** to enter the Printer port.
Use the numerical keys to enter the Printer port.

- Press **STORE** to save the Printer port.
- Press **NEXT** to save and move on to the next menu item.

### 5.18 Printer queue

In case automatic printing has been enabled a network printer queue name has to be specified.

Use the numerical keys to enter the Printer queue.

- Press **CHANGE** to enter the Printer queue.

Use the numerical keys to enter the Printer queue.

- Press **STORE** to save the Printer queue.
- Press **NEXT** to save and move on to the next menu item.

### 5.19 NTP Server

**Network Time Server** refers to the IP address of the Network Time Server. Network Time Server is used to synchronize the time of the Fax Server with the time on the Network Time Server.
Set the IP address of the NTP server.

- Press **CHANGE** to enter the IP address of the NTP server.

Enter the IP address of the NTP server.

Use the numerical keys to enter the IP address of the NTP server.

- Press **STORE** to save the IP address of the NTP server.
- Press **NEXT** to save and to move on to the next menu item.

### 5.20 NTP Server Port

NTP server port is the port number through which the Fax Server connects to the Network Time Server. The NTP server port is default set to 123, as is the setting of the port number in most NTP servers. If there is no direct reason to change the NTP server port it is best left unchanged.

Enter the NTP server port number.

- Press **CHANGE** to change the NTP server port number.

Enter the NTP server port number.

Use the numerical keys to enter the NTP server port number.
• Press **STORE** to save the NTP server port number.
• Press **NEXT** to save and to move on to the next menu item.

### 5.21 GMT correction

**GMT correction** property is used to identify the time zone. NTP server normally issues GMT. GMT correction can be set in half hours from -15:00 to +15:00.

<table>
<thead>
<tr>
<th>GMT correction:</th>
<th>00:00</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEXT</td>
<td>CHANGE</td>
</tr>
</tbody>
</table>

Send Start Time.

• Press **CHANGE** to set GMT correction. Keep pressing **CHANGE** to increase the correction. It will start with + 1:00, keep pressing **CHANGE** to increase. After + 15:00 there will appear - 15:00.
• Press **NEXT** to save and move on to the next menu item.

GMT correction refers to Winter time. Summer time and Winter time are corrected automatically.

### 5.22 Telnet

Telnet can be used to log on to the Fax Server and configure the Fax Server from your PC. If required contact your supplier for more details.

<table>
<thead>
<tr>
<th>TelNet active:</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEXT</td>
<td>CHANGE</td>
</tr>
</tbody>
</table>

Enable TelNet.

• Press **CHANGE** to enable TelNet.

<table>
<thead>
<tr>
<th>TelNet active:</th>
<th>Yes</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEXT</td>
<td>CHANGE</td>
</tr>
</tbody>
</table>

TelNet enabled.

• Press **NEXT** to save and move on to the next menu item.
5.23 Service timer

The Service timer determines the performance of the network connection. Default the Service timer is set to Automatic. Changing the setting should only be done when advised by a service engineer to solve problems.

<table>
<thead>
<tr>
<th>Service timer:</th>
<th>Auto</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHANGE</td>
<td>STOP</td>
</tr>
</tbody>
</table>

Set the Service timer

- Press **CHANGE** to change the Service timer.

The following settings are available:
S1-S5, F1-F4 and U1-U4.
Where S stands for Slow, F for Fast and U for Ultra fast.
The Service Timer is the last item in the LAN settings menu.

- Press **STOP** to exit the LAN menu.
6 The Internal Number List and how faxes are answered

The next step in the configuration is to fill in the Internal (Fax) Number List.

Normally you will have to tell a Fax Server what numbers it should answer. On an ISDN line bundle, PRI or BRI, there are several or many numbers available. The internal fax number list is the list of numbers that the Fax Server will answer to.

However, there is an exception to this rule: if the Fax Server is configured to be the only machine on the line(s), then it will answer all incoming calls. This will when:

- A Fax Sever for ISDN BRI is stand alone on a point to point line.
- A Fax Server for ISDN PRI is in stand alone mode (a PRI line is always “point to point”)

In the above two situations the Fax Server will receive faxes and handle them as in the default settings given by you as LAN settings or system settings.

In all other cases the Internal Number List will be applied.

The Internal Number list is nothing more then a list of numbers that the Fax Server will answer to. These numbers must be supplied to you by the telephony provider. In some instances you get many of numbers for one line or bundle of lines already when you subscribe. In other cases you will have to order more numbers from your provider. In any case the idea is that everyone in your office who needs a direct fax number will get that, just like he has his direct phone number.

To every number in the list an email address should be added. Faxes received on the fax number are forwarded by email to the associated email address. In this way everyone in your office will immediately receive the faxes that are sent to his own direct fax number.

Important: The internal number list can also be managed on the PC. See the next chapter about managing users.
There is also an external number list. The external number list is used to define fax recording numbers. This was only available in older models.

6.1.1 Add a new number to the internal number list

To access the number list on a desktop model:

- Press No.List function key to open the number list menu.

To access the number list on a 19” model:

- Press the Settings function key
- Press LIST softkey to open the number list menu.

Fax Number Lists

INTERN EXTERN STOP

The Fax number lists.

- Press INTERN

faxes@company.com
123456
NEXT NEW DELETE STOP

The Fax number lists.

- Press NEW to add a new fax number to the list.

Number: STORE CLEAR CANCEL

Enter the fax number

- Press STORE to add a new fax number to the list and continue with the email address.
**Important:** When entering fax numbers you can decide to include or exclude the area code. Do not use leading zeros. Keep it the same for all users (include or exclude area code). This will make it easier for the Fax Server to match the numbers with the numbers that are used on the telephone network.

Enter the Email address.

Use the numerical keys to enter the Email address.

- Press **STORE** to save the number and Email address.
- Press **STOP** to leave the number list.

If any changes to the list have been made you will be prompted to save the changes. If you choose **NO** the list will remain unaltered.

### 6.1.2 Delete a number from the fax number list

- Select the Fax Number List menu.

The Fax number lists.

- Press **INTERN** or **EXTERN**

The Fax number lists.

- Use the **<<** and **>>** keys to scroll through the fax number list.
- Select the entry you want to delete.
- Press **DELETE** to remove the number
- Press **YES** to acknowledge.
- Press **STOP** to leave the number list.
If any changes to the list have been made you will be prompted to save the changes. If you choose **NO** the list will remain unaltered.
7 Managing Users

7.1 Introduction

User access to the Fax Server is for the users on the network who can have access in three ways:

- To receive faxes via email. A fax number must be created and a link must be made between the fax number and an email address.
- To send faxes. The users must be identified, to maintain the database and to prevent unwanted use.
- To access the database. Users must only be able to see those faxes that they are allowed to see.

The access is controlled in the Fax Server as a list of FTP accounts and as the internal number list.

The FTP user accounts are not only used to control the access, but also to maintain and personalize the Fax Server's archive.

- The Fax Server will keep track of who has sent or received a specific fax.
- The Fax Server will allow a user to view faxes that have been sent by specific users and to view faxes received on specific telephone extension numbers only.

The Fax Server Setup application for MS Windows is the tool for the network manager to create the internal number list via the LAN and to manage the FTP accounts.

There is no tool on the keyboard of the Fax Server to manage user access. The reason is that it would not be very practical.

The Fax Server Setup program on the PC does not keep any records by itself. Every time the application is started a connection to the Fax Server is required to retrieve the user information. This information can then be edited and uploaded to the Fax Server.

**Important:** It is possible to create user accounts without an FTP account. This is the same as the INTERNAL NUMBER LIST. When there is just an Internal Number list and when no user accounts are managed, you get a somewhat simplified installation of the Fax Server. Everyone would use
the same access code to send faxes or access the database. This might be perfectly acceptable for smaller organizations.

### 7.2 Installation of Fax Server Setup

Placing the CD-ROM in your computer gives you a choice of installation of Vidicode software. Choose to install the Fax Server Setup software. Follow the instructions on the screen. Part of the instructions is that the software will ask for a registration key that you will find packed with the software.

![Fax Server Setup Wizard](image)

### 7.3 Software updates

It is always recommended to update your software to the latest revision. The Fax Server Setup application can be updated via internet.

Choose **Help** in the main menu and select “**Check for update**”
A new dialog opens where the current version is displayed. Click on the “Check update” button to check for updates. The program will check on the Vidicode website for updates of the program. If there are updates they will be displayed. Click “do update” to execute the update.

**Note:** The file that is downloaded is a zipped file that is unpacked by the application itself. Update files are approximately 1 Mb in size. Updates can not be executed while the program is performing other tasks. An open internet connection is required for this operation.

### 7.4 Setting up a Fax Server

When the program is started the following dialog appears:

- Enter the Fax Server IP address.

The port setting on the Fax Server is default set to 21.

- Select the UserID’s tab.

The Fax Server Setup will now come up with the following dialog for FTP username and password:
• Enter the administrator FTP username and password.

The Fax Server Setup will now make a connection to the Fax Server to retrieve user information.

Now select the User ID’s tab after the connection has terminated. The user list as on the Fax Server is now displayed. If there is no user list present on the Fax Server the dialog will be blank.
7.5 The user list

The user list displays the User ID, The username the email address and fax number.

The User ID consists of two characters; the user ID is used throughout the Fax Server applications to identify a user.

The username is the text that identifies the user for you.

The email address is the email address where faxes received for the user and confirmations of sending faxes are sent.

The Fax Number is the telephone number which is used as a fax number of the user.

**Important:** When entering fax numbers you can decide to include or exclude the area code. Do not use leading zero’s. Keep it the same for all users (include or exclude area code). This will make it easier for the Fax Server to match the numbers with the numbers that are used on the telephone network.

7.6 Create a new user

Click **NEW** to create a new user. The following dialog appears:
Enter the user properties of the new user.

For every user there is an option to create an FTP account for the user. With the FTP account a user can setup a connection to the Fax Server with the Fax Server Access System software to view his or her faxes on the Fax Server. For every user access to existing user accounts can be set. Check the checkboxes of existing users in the list to enable access to the faxes of said users.

Click OK to finish.

7.7 Edit a user profile

A user profile is edited much the same way as creating a new user.

- Select a user in the list of users and click “Edit”

A new dialog appears with the selected user properties. Now you can edit the user properties.
- Click **OK** to save the changes.

At this point the user profile has changed in the user list as displayed on your screen. To save the list on the Fax Server the list needs to be transferred to the Fax Server.

Press "**Update Fax Server**" to transfer the user profiles to the Fax Server.
8 In service operation

Under normal circumstances the Fax Server does not need much attention. Operation is through the Fax Server Access System and Send Fax applications. Once the settings have been made the sending and receiving of faxes is automatic.

On the keyboard of the desktop model there are 5 function keys, which give access to functions of a Fax Server in operation. The 19” model has three of such function keys. The function keys are described in the following paragraphs.

To access the Archives on the desktop model and on the 19” model:

![Archive](image) or ![Archive](image)

is the fax archive of sent and received faxes.

To access the queues on a desktop model:

![To Email](image) function key to check the email queue and test email.

![To Fax](image) Fax queue function key to check the outgoing queue.

To access the queues on a 19” model:

![Queue](image)

To go to the Queue menu
Then choose with softkeys between the EMAIL, FAX and PRINT queues
To view the free disk space on a desktop model:

Disc function key displays the free disk space.

To view the free disk space on a 19” model:

HD/CD function key displays the free disk space.

8.1 Fax Archive

Press Archive or Archive to open the Fax Archive. There are two separate archives for Received and Sent faxes. Both archives are operated in the same manner. They are described in the following paragraphs; § 8.1.1 and § 8.1.2 Faxes in the archive can be sent again as fax (see § 8.3) or through email (see § 8.2).

8.1.1 Received faxes

Open the Fax Archive and press RECEIVED to open the received faxes archive.

• Press the Received key to enter the received faxes menu.

Received faxes archive can be searched on time, date and/or Fax ID.
Search the received faxes.

In the search the date time and Fax ID is always incorporated. You are first prompted to enter the date.

- Enter the date you want to search and press SEARCH to perform the search.

If you want to search on date only the Fax Server uses wildcards in the search strings for the time and Fax ID.

If you want to search according to date only you can enter wildcards for the date, e.g. **:***:***.

It is possible to further refine your search according to Time.

- Press the TIME key
- Enter a time to search for. Use wildcards * (star key) to expand your search criteria, e.g. enter 13:*:*** to search for faxes received between 13:00 and 13:59 hours for the specified date or date range.
- Press SEARCH to search for the entered search string.

It is possible to further refine your search according to Fax ID.

- Enter a time or wildcards for in the Time search string and press Fax ID
- Enter a Fax ID to search for.
- Press SEARCH to search for the entered search string.

Use the double arrowed keys to scroll through the found faxes and select a fax. Use the single arrowed keys to scroll through the fax properties of the selected fax.

**8.1.2 Sent faxes**

Open the Fax Archive and press SENT to open the received faxes archive.
• Press the **Received** key to enter the received faxes menu.

<table>
<thead>
<tr>
<th>Sent Faxes</th>
</tr>
</thead>
<tbody>
<tr>
<td>DISK</td>
</tr>
</tbody>
</table>

The Sent faxes menu.

• Press **DISK** to open the respective item.

The Sent faxes archive can be searched on time, date and/or Fax ID.

<table>
<thead>
<tr>
<th>Sent on</th>
<th>4-08-04</th>
</tr>
</thead>
<tbody>
<tr>
<td>SEARCH</td>
<td>TIME</td>
</tr>
<tr>
<td>STOP</td>
<td>STOP</td>
</tr>
</tbody>
</table>

Search the Sent faxes.

In the search the date time and Fax ID is always incorporated. You are first prompted to enter the date.

• Enter the date you want to search and press **SEARCH** to perform the search.

If you want to search on date only the Fax Server uses wildcards in the search strings for the time and Fax ID.

If you want to search according to date only you can enter wildcards for the date, e.g. ***:*:*:***.

It is possible to further refine your search according to Time.

• Press the **TIME** key
• Enter a time to search for. Use wildcards (star key) to expand your search criteria, e.g. enter **13:*:*:*** to search for faxes sent between 13:00 and 13:59 hours for the specified date or date range.
• Press **SEARCH** to search for the entered search string.

It is possible to further refine your search according to Fax ID.
• Enter a time or wildcards for in the Time search string and press Fax ID
• Enter a Fax ID to search for.
• Press SEARCH to search for the entered search string.

Use the double arrowed keys to scroll through the found faxes and select a fax. Use the single arrowed keys to scroll through the fax properties of the selected fax.

8.2 Email queue

The email queue is the queue of emails that have not (yet) been sent out. (This may be caused by an error in the mail server)

• Press EMPTY to empty the email queue, all emails in the queue are lost.
• Press TEST to place a test email in the queue. Normally a test email is sent in a matter of seconds.

8.2.1 Send an Email again

Faxes that are present in the archive can be sent again as Email. The fax can be sent to any Email address.

• Select a fax in the Received or Sent archive.
• Press the function key (on a desktop model)

  Email: info@vidicode.nl
  STORE  << CLEAR BACK

Email a fax from the archive.

• Enter the Email address or fax number.
• Press STORE to place the email in the queue.

The email queue is automatically processed every 5 minutes.
8.3 Fax Queue

The fax queue is the queue of faxes that have not(yet) been sent out. (This may be caused by an error from your service provider) Normally the Fax queue is empty.

- Press **EMPTY** to empty the fax queue, all faxes in the queue are lost.
- Press **BROWSE** to browse through the faxes in the queue. The browse menu is the same as the Archive menu as in § 8.1.1 and § 8.1.2.

8.3.1 Send a fax again

Faxes that are present in the archive can be faxed again. The fax can be sent to any fax number.

- Select a fax in the Received or Sent archive.
- Press the function key (on a desktop model)
- Press the function key (on a 19” model)

```
Number: 0793471001
STORE  <=  CLEAR  BACK
```

Fax a fax from the archive.

- Enter the fax number.
- Press **STORE** to place the fax in the queue.
  The fax queue is automatically processed every 5 minutes.

8.4 Disk info

To show the free disk space of the Fax Server’s internal storage on the bottom line of the display.

- Press the Disc or HD/CD function key
The free disk space
9 Acknowledgements

9.1 Guarantee

Your Fax Server has a 12-month factory guarantee. The guarantee is effective for normal use only. We would like to emphasize that the guarantee is not valid under exceptional environmental conditions, such as extreme temperatures or humidity levels, nor in the unlikely event of a lightning strike. The guarantee is not valid if the machine has not been handled properly, for example when it has been dropped, or bumped into. In order to qualify for guarantee, you should contact your supplier, and show the receipt. If your supplier cannot help you, you should contact the manufacturer. The manufacturer reserves the right to determine the final date of the guarantee period on the basis of the date of production. Costs of transport to and from the supplier or the manufacturer are for the buyer’s account. Guarantee is for parts only and does not cover any costs resulting from the breakdown of the Fax Server.

The Fax Server has various extra features that have not been described in this manual. Additional information about this is given in a technical information bulletin. Subjects discussed in this technical documentation are further configuration options, remote configuring, and how to update the firmware in the Fax Server. The further configuration options concern all aspects of operation. In our experience most people are interested in configurations related to user’s access.

9.2 Liability

Correct functioning of the Fax Server cannot be guaranteed under all conditions and thus we do not accept any liability for loss of information or other damages due to the use of the Fax Server. Vidicode is not a source of official interpretation of laws of any country or state and shall not be construed as a source for making decisions.
